RE: 2017 Seed Order

Enclosed is the 2017 seed order form (pink) and 2018 seed request form (yellow). All varieties offered are Foundation class of certified seed. Varieties IA2102, IA2102RA12, IA2112RA12, IAR1902 SCN and IAR2601 SCN were entered into Iowa Crop Performance Test. This yield data is available at <http://www.croptesting.iastate.edu> Yield data for other varieties should be available soon and will be posted on CAD's website www.cad.iastate.edu when available. Variety prices are listed on the 2017 order form. This price does include royalty for each variety listed.

Seed quality and preliminary bin germinations are very good. Conditioned lot germinations are expected to be 90% or better. Seed size is expected to be average for each variety.

A limited amount of seed of the varieties IA2112RA12, IA2113RA12 and IA3054RA12 is being offered in 2017 from a more intensified increase to improve seed purity. Planted seed stock was hand sorted removing off-type hila then rogued removing off-type flower and mature plants. Although the GMO occurrence may have not been completely removed it has been significantly reduced.

Once conditioning is completed I will be able to inform you of the exact seed analysis. **Return the 2017 Seed Order form (pink) by January 13, 2017.** Orders will be filled as requested or be given a seed allocation if the demand exceeds the supply. Late placed orders will be filled as received if a seed supply is available.

Due to previous presence of GMO in the varieties IA2112RA12, IA2113RA12 and IA3054RA12 a re-purification was started in 2016 with individual plant selections. Also there was a small amount of IA1029 breeder seed increased for a pure seed source. It is expected that these re-purified varieties will be available in limited quantities in 2018. Licensees returning the 2018 seed request will have the first opportunity for these re-purified varieties.

CAD's Foundation seed production is done by request only. Therefore, varieties will only be increased in 2017 which are requested for 2018 seed. **Please return the 2018 Seed Request form (yellow) by January 13, 2017.**

If you are unsure on a variety license status please contact Julie Minot at ISURF jjgus@iastate.edu or 515-294-9442.

Although great care is taken to produce and condition our conventional seed to the high certification standards of the Iowa Crop Improvement Association, we will not guarantee the seed to be 100% free of GMO's. Our varieties are tested for the presence of GMOs and those test results are available on request.

NOTE: All royalty reports and royalties due and payable to ISURF as of September 1, 2016 must be submitted and paid in full before any new seed requests will be accepted by CAD. ISURF and CAD cannot guarantee that all varieties will be available.
